About

I'm a passionate Frontend Developer who enjoys converting designs into pixel-perfect code. I also enjoy learning new technologies and constantly striving to improve myself.

Work Experience

- **TurkNet** Intern Frontend Developer **(09/2022 - 09/2023)**

TurkNet is one of the best internet service providers in Turkey. In TurkNet, I have worked on React Native application & few internal projects.

- **Teknasyon** Jr. Frontend Developer **(02/2022 - 09/2022)**

I've worked in Deepwall project where we were delivering React Native apps to customers.

- **Teknasyon** Intern Frontend Developer **(09/2020 - 02/2022)**

I've worked with precious people in Teknasyon to produce real-world grade products and learn while working as an intern at the same time.

Education

- **Istanbul Arel University**

- **Computer Programming - 2021**

- SIT Tech Club Membership
- Volleyball Club Membership

References

- **Hasan Dinç (Teknasyon)** Frontend Tech Lead

He was my tech lead throughout my Teknasyon journey. I learned what a company & team means from him.

Phone: +90 542 420 3327

Email: hasandinc@teknasyon.com

- **Ahmet Yılmaz (TurkNet)** Frontend Tech Lead

Ahmet Yılmaz was my Tech Lead, we worked together to produce better solutions for TurkNet including mobile application & internal projects.

Skills

- Teamwork
- Adaptability
- React, NextJS, TypeScript & Jest
- Responsiveness
- Performance
- React Native

Projects

Nexys <https://nexys.app>

- **Nexys** is an analysis SaaS. Developing since 2023, implementing 0-dependency lightweight library to your production application allows you to catch any errors and shows them on your dashboard. **Nexys** is built by me from top to bottom from scratch.
- **Frontend Tech Stack:** NextJS, TypeScript, Firebase, SWR & Tailwind
- **Backend Tech Stack:** Laravel, MongoDB, Docker, DigitalOcean & GitHub Actions

Baktir.app <https://baktir.app>

- **Baktir** is an astrology website that has AI predictions with accurate API's. I was a part of 3-people team, leading our frontend and backend solutions to our website.
- **Frontend Tech Stack:** NextJS, TypeScript, Jest, Firebase & Tailwind
- **Backend Tech Stack:** Laravel & MongoDB

Topla <https://github.com/erenkulaksiz/Topla>

- **Topla** is an mathematics game to improve people's basic algebra speeds. This game also allows you to split your phone's screen so your friend and you can make a race to see which one of you are fastest. Written with **React Native**, implements premium subscriptions with Google Play's payment options.

R1 <https://github.com/erenkulaksiz/R1>

- **R1** is an basic game engine that is developed with **C++** and **OpenGL**. Basic idea was to be able to make games, faster. Project is abandoned altogether, but it was a fun project.
